

# WALMART FRONTLINE AI TRANSFORMATION

## Individual Contribution Statement

ALY-6130 | Group 9 | Northeastern University | Vancouver Campus | June 25th 2026

Ezinne Lynda Anyinofu

### Primary Contributions

The following table documents my specific and primary contributions to the Walmart Frontline AI Transformation ERM project across all modules of ALY 6130. Each contribution reflects my individual area of responsibility within the team.

| Module | Deliverable                     | Specific Contribution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| M1     | SWOT Research and APA Citations | Conducted the evidence-based research supporting all SWOT entries, sourcing competitive intelligence on Amazon AI investments (\$85B), Target AI deployment, regulatory developments (EU AI Act, FTC guidelines), and Walmart financial data from the 2023 10 K Annual Report. Authored the brainstorming approach documentation at the top of the SWOT template and compiled all seven APA formatted references, verifying each source against the approved databases (Web of Science, ScienceDirect, Emerald, ProQuest, Gartner, McKinsey, Deloitte).                                         |
| M2     | KRI Worksheet Development       | Developed the complete KRI worksheet for all three competitive risks, documenting the leading indicator selection rationale, traffic light threshold justification with specific numeric trigger levels, measurement methodology, and action owner assignments. Ensured E-Commerce Market Share %, Customer Churn Rate, and Inventory Turnover Improvement Rate were classified and justified as leading rather than lagging indicators consistent with the COSO KRI framework.                                                                                                                 |
| M3     | Research Justification Sheet    | Developed the Research Justification sheet added to the M3 Excel workbook as the first worksheet, documenting the specific evidence and APA-cited sources supporting the likelihood and impact scores assigned to all 29 risks. Each entry included a detailed justification paragraph referencing specific data points from Walmart 10 K, McKinsey, Gartner, Deloitte, IBM Security, Amazon Annual Report, EU AI Act, FTC enforcement data, and IHL Group Retail Inventory Study.                                                                                                              |
| M4     | Synthetic Dataset Design        | Designed and generated the 500-record synthetic dataset (Walmart Risk Dataset.csv) used to train and validate the Random Forest machine learning model. The dataset spans 19 columns including Risk ID, Year (2018-2024), Company, Industry, Risk Category, Risk Type, AI Adoption Rate, Competitor AI Investment, Market Share Change, Customer Churn Rate, Inventory Turnover Improvement, Likelihood Score, Impact Score, Probability, Financial Impact, Expected Loss, Risk Priority, Outcome, and Risk Score, simulating realistic retail AI risk events across 10 major retail companies. |

## Shared Team Contributions

In addition to the primary contributions documented above, I participated equally with all team members in the following collaborative activities:

- Weekly team discussions and structured brainstorming sessions that informed risk identification, scoring, and response strategy decisions across all modules.
- Peer review of all deliverables before submission, providing feedback on content accuracy, APA citation format, and professional language standards.
- GitHub repository management, reviewing and approving pull requests, contributing to the collaborative version control workflow throughout the course.
- Joint review and editing of the final Signature Assessment report to ensure consistency, accuracy, and alignment across all sections.
